

Product Name	6inch Biodegradable cutlery set manufacturers
Size	6 inch
Weight	12g
Material	CPLA
Packing	1 set/bag, 500 bags/ctn
LOGO	Available

Q1: What is CPLA material?

A1: CPLA is a crystallised PLA which is stronger and withstands higher temperatures.

Q2: What is the difference between CPLA and PLA?

A2: PLA stands for Polylactic Acid. It is a biodegradable plastic derived from renewable starch

resources such as corn or sugarcane.

CPLA is a crystallised PLA which is stronger and withstands higher temperatures.

Both PLA and CPLA are sustainably produced and 100% biodegradable and compostable.

Q3: Can it been used for hot food?

A3: Yes, it can be used for hot food. The highest temperature is up to 212 degree.
